

# Centerity Analyzer

Centerity

Changing the Rules for Monitoring Tools

## Overview

Centerity is a software company developing and delivering comprehensive IT monitoring solutions. Centerity provides a professional line of products including *Centerity Monitor* an all-in-one enterprise scale monitoring system, *Centerity Tracker* – powerful change management system, *Centerity Netflow & Sniffer* based tools and *Centerity Analyzer* – data intelligence system. Centerity's advanced technology provides the most cost-performance solutions.

## Centerity Analyzer

### Overview

Centerity Analyzer is a high capacity data intelligence engine for any type of information. The system collects data, analyzes, performs index and catalogs it. Performing intelligence analysis and alerts for any organizational unit such as network administrators, system team, NOC team, managers and management and giving new visibility and insights on the business.

### Key Features

- Gain visibility across your entire organizational data.
- Process large volumes of data from any source and any format including log messages, records, event-logs, CDR's and others.
- Log collection, centralized aggregation, long-term retention and analysis in real-time as well as log search and advanced reporting.
- Customized reports and layouts.
- Static thresholds – configure your own thresholds using numerical values or regular expressions.
- Dynamic thresholds intelligence to detect anomalies and changes over time.
- Normalize data and support undocumented proprietary log-formats.
- Apply different types of search patterns with maximum flexibility.
- Central dashboard, views and event console.
- Manage users and groups in multi-tenant mode apply roles, permissions, views and administration.
- Seamless integration with Centerity Monitor – viewing real time alerts in single central dashboards.

### Methods

Centerity Analyzer uses modules and plug-in engines to receive and extract data from a wide range of information sources. Centerity supports two main methods:

#### Collector - sophisticated scheduler with great flexibility and highly configurable engine:

- Centerity Monitor - historical & real time information.
- Centerity agent collector - supports all operating systems (Windows, Linux, Solaris, HP-UX, AIX, BSD, etc).
- Agent less methods - SSH, WMI, Telnet, remote registry methods:
  - Log files (application, system logs, and custom log files).
  - Text and binary files.
  - Configuration files.
  - Event viewer.
- Database - multi vendor support (Oracle, MSSQL, Sybase, DB2, MySQL etc).
- Folder and file watchers.
- SNMP queries.
- Proxy data collection.

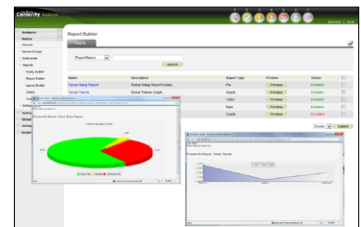

- Packet data - using TCP dump to analyze network packets.
- Network plug-ins - TCP, UDP, ICMP.
- Web plugins - HTTP, HTTPS web services (SOAP, XML/ RPC).
- User defined custom plug-in and hooks, supports different types of development languages (C/C++, #Net, Perl, VBscript, Python, Java and more).

#### Listener Modules - allows remote servers and devices to send information:

- Radius accounting
- Syslog
- Database
- SNMP traps
- Web service
- Custom listener
