

Centerity Monitor ENTERPRISE EDITION

Overview

Centerity Monitor Enterprise edition delivers high capacity & scalable monitoring solutions for large enterprises & complicated environments.

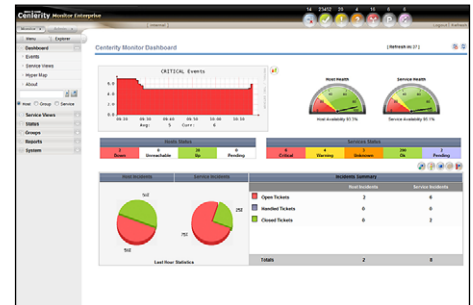

Centerity Monitor Enterprise edition allows you to manage, configure and view from a single central console - availability, health and performance of the entire infrastructure.

Centerity Monitor Enterprise edition provides real time wide visibility of your servers, hardware, network devices, user experience, business service management, applications and more. This information will enable you to spot potential problems and proactively fix them before they affect your end-users and clients.

Your ultimate and complete solution for monitoring and managing performance and availability of your entire infrastructure - applications, network devices and servers - across a wide range of operating systems including Linux, Unix, Windows, Netware, and others from single central console.

Key features

- ❖ Centerity Monitor Enterprise edition includes full support distributed monitoring - Centerity Monitor tracks and collects information from Centerity Monitor distributed nodes spread across your entire infrastructure without geographical limits.
- ❖ Consolidated centralized information console - all information gathered and displayed in single pane console with advanced event correlation and root cause analysis.
- ❖ Centralized management and configuration - administration and deployment can be done in no time using the consolidated administration screen.
- ❖ Large scale monitoring up to 400,000 hosts and up to 10 million service checks.
- ❖ Centerity Monitor cluster kit allows you to monitor huge scale networks.
- ❖ Virtual monitor instance - power up additional Centerity Monitor instance in remote Centerity distributed nodes and control them from the central console. This allows you to leverage computer power and produce up to 20,000 monitoring checks near real time.
- ❖ Help desk and asset information - integrated asset management allows you to track all hardware and software inventory from a central console, catalog and specify solutions for problems in order to avoid waste of time and mislead information regarding occurrences.

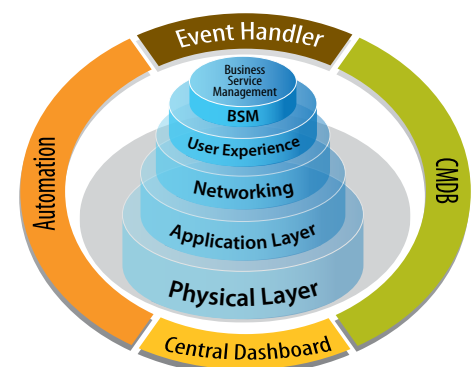

Central Dashboard

Business Views & SLA Reports

“Centerity Monitor provided us with a complete monitoring solution for the company’s entire infrastructure, including: IT servers and network devices, internet, voice, electricity foundations, application monitoring and user experience measurement. Centerity solution improved our efficiency, allowed us to proactively react to problems and reduced our downtime and breakdowns without impacting our budget.”

Oren Daniel
NOC Manager 013 Netvision

Centerity Monitor ENTERPRISE EDITION

Centerity
Changing the Rules for Monitoring Tools

Centralized management and consolidation

Centralized SLA and SLM reports and history data analyzing, such as hosts and services availability, trends and network outages, performance data - provide insight infrastructure back stage. Historic trends offer you the possibility to analyze and plan futuristic strategies, and proactively manage network availability and performance across time.

Business service views

Business service views allow you to link service monitoring to the goals of the business and enable you to understand and predict how technology impacts the business and how business impacts the IT infrastructure.

Real time health views of business processes and transactions. Quickly build end to end infrastructure service health views.

Apply thresholds to service availabilities and reduce the risk of failures to comply with SLA's. Understand and analyze problems in any service component layers.

User eXperience

User eXperience add-on allows you to detect & fix performance problems before end users even know about them, by configuring, recording and playing complex user scenarios.

Measure applications response time, detect & fix service problems, increase & improve end-user satisfaction.

Distributed monitoring

Centerity Monitor Enterprise edition provides a modular design that allows you to scale according to your infrastructure and various architectures, and also provides cluster solutions to enhance high availability.

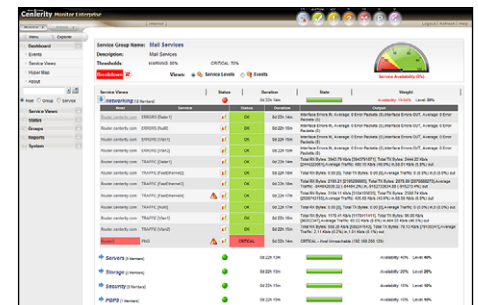

Automatic distributed node failover

On distributed node emergencies Centerity Monitor Enterprise edition can transfer host and service checks automatically to standby distributed nodes.

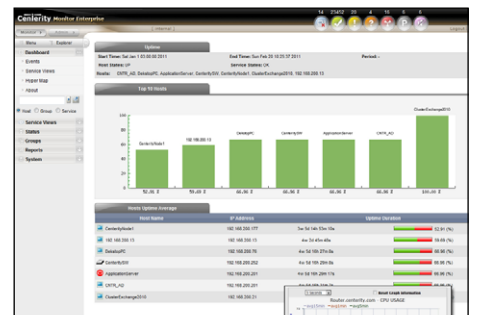

Distributed agents & probes

Centerity Monitor distributed agents can be deployed remotely on Windows and Linux servers and can monitor isolated environments. Probes are miniature diskless computer modules that allow you to deploy in extreme environments, configure and control from a central location on active and passive checks.

Centerity Monitor will help you track, detect and manage your servers, applications, networks, measuring performance and availability. Ranging from small businesses to large enterprises & service providers, we offer a wide range of easy-to-use inexpensive monitoring solutions.
