

Centerity Monitor STANDARD EDITION

Centerity
Changing the Rules for Monitoring Tools

Your ultimate and complete solution for monitoring and managing performance and availability of your entire infrastructure - applications, network devices and servers - across a wide range of operating systems including Linux, Unix, Windows, Netware and others.

Centerity Monitor is an enterprise class compliance software which allows organizations to achieve availability, performance, service level reporting, and operational efficiency & control to their infrastructure, including enterprise tools such as business service management, user experience monitoring, hardware & software inventory, application monitoring and more, which leads to significantly improving uptime and performance.

Centerity software provides enterprise class applications by combining best of breed open source applications with innovative developed software.

Know your network

Centerity Monitor standard edition enables you to track problems before your customers, end-users or managers do.

Every component of your IT infrastructure can be tracked and monitored with a wide variety of monitoring methods, using agents, agent less, SNMP, WMI, pulling and pushing methods, and more. With hundreds of certified plugins such as: HTTP, SMTP, Traffic, CPU, DISK, MEMORY, etc. and thousands of predefined templates you can begin the monitoring process immediately.

Easy installation and deployment

Centerity Monitor is easily deployed in any type of network and environment - from small networks to large scale enterprise networks with distributed options. By using easy to use installers, servers and agents can be installed in minutes.

Centralized views and reports

Powerful web based front end allows you to view and troubleshoot, create comprehensive application performance reports in real-time, baseline & trend statistics. Optimize your applications and create comparison graphs for different types of flows and scenarios.

Alerts & actions

Powerful capabilities which enable a series of reactions to problems detected by Centerity Monitor in response to outages, performance thresholds or anything else of importance.

Alerts can be sent via SMS, email, messaging software etc - actions useful in the case of an emergency when a service failure occurs and no one is available to repair it. The Event Handler performs actions such as restarting the problematic service, rebooting computers, sending SNMP traps and more.

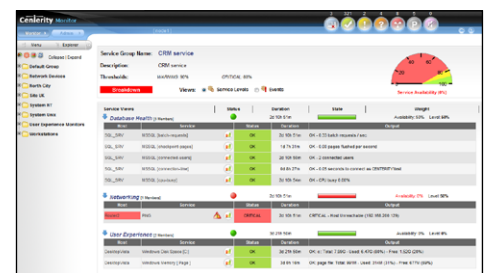

“Centerity Monitor provided us with a complete monitoring solution for the company’s entire infrastructure, including: IT servers and network devices, internet, voice, electricity foundations, application monitoring and user experience measurement.

Centerity solution improved our efficiency, allowed us to proactively react to problems and reduced our downtime and breakdowns without impacting our budget.”

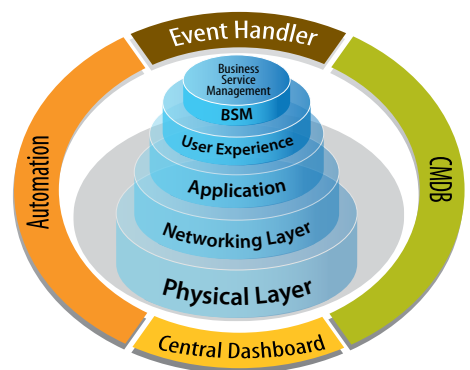

Oren Daniel
NOC Manager 013 Netvision

Centerity Monitor STANDARD EDITION

Centerity
Changing the Rules for Monitoring Tools

Traffic monitoring

Real time visibility and alerts on network usage, built in traffic monitoring module ensures the quality of service and availability of LAN's, WAN's, routers, and more. Using automated discovery tools allows you to perform thousands of SNMP queries across the network using only small amounts of data utilization.

Application monitoring

Centerity Monitor allows you to deploy and configure deep application inspections and analyzing on demand via performance counters, WMI, WBEM and command line specific tools for applications such as Microsoft Exchange, MS SQL, Share Point, Oracle, Bea web Logic, Firewalls, Radius.

User eXperience

Centerity eXperience add-on module allows you to know your end user experience from anywhere in your network.

Configure, record and play complex user scenarios; Measure applications response time, detect & fix service problems, increase & improve end-user satisfaction.

Business service views

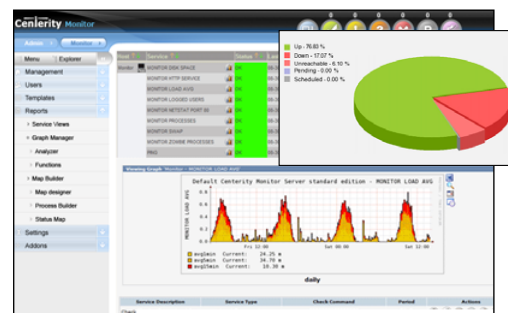

Real time health views of business process and transactions. Quickly build end to end infrastructure service health views.

Apply thresholds to service availabilities and reduce the risk of failures to comply with SLA's. Understand and analyze problems in any service component layers.

Over the last 6 years, Centerity Monitor has successfully served in organizations ranging from SMB to global enterprise from all districts (Telecom, ISP, industrial, technology, government, defense, financial and more) delivering a complete easy to use all-in-one monitoring system with the most advanced features, modules and complete independence.

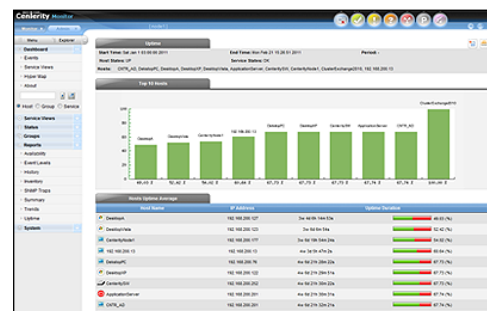

Centerity Monitor will help you track, detect and manage your servers, applications, networks, measuring performance and availability. Ranging from small businesses to large enterprises & service providers, we offer a wide range of easy-to-use inexpensive monitoring solutions.

Centerity solutions are based on well known open source alternatives. The benefits for customers are being able to perform more tasks and receive more features only at a fraction of the cost of traditional software.

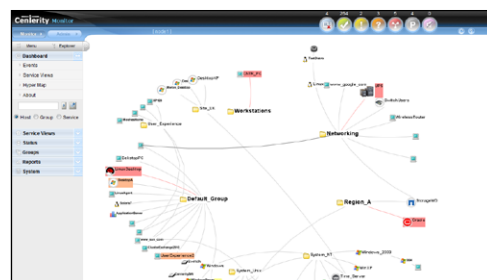

Statistics

Centerity Monitor subscription includes services to Centerity Support Center and unlimited email support, as well as product updates and upgrades.
